

LITTER MAGIC®

➤ ***Litter Decomposition***

Speeds up the breakdown of organic matter in poultry litter, promoting a cleaner and more manageable bedding environment.

➤ ***Litter Conditioning***

Improves the quality of chicken litter by reducing moisture, ammonia levels, and pathogens, providing a dry and comfortable place to raise your birds.

Litter Magic is composed of a unique micro-nutrient enriched carrier to provide accelerated germination and growth. Stable bacteria spores enhance shelf life and guarantee microbial concentration. Spore-form allows it to resist chlorine, disinfectants, and high-water temperatures.

Manufactured for Turkey and Chicken Production

Net Wt. 50lbs

LITTER MAGIC®

Recycled Litter:

After the cake is removed from the barn, spread two [2] pounds of Litter Magic granule bacteria per 1,000 square feet of floor space. Pay attention to the application of the bacteria along any exterior walls and under feed and water lines. It is critical to till the Litter Magic deep into the litter.

Windrow Litter: If the litter is to be windrowed after the cake is removed, spread two [2] pounds of Litter Magic granule bacteria per 1,000 square feet of floor space directly to the litter and proceed to mound or windrow the litter. Windrow is the preferred application method. Again, either till the Litter Magic deeply into the litter or windrow the litter with the Litter Magic. When the litter is leveled from the windrow there is no withholding period prior to reintroducing poultts or chicks into the barn. Moisture is key in the function of Litter Magic. If the litter is dusty and dry, it must be dampened.

Application after total clean-out of litter:

On an earthen floor, spread two [2] pounds of Litter Magic per 1,000 square feet of floor space prior to introduction of any litter. Litter Magic will not function if placed on top of new, dry litter. On concrete floors after total clean-out: We do not recommend the application of Litter Magic to a dry, thoroughly cleaned concrete floor. Litter Magic colonizes in an organic environment. Should the concrete floor have litter remaining and has not been thoroughly cleaned, follow the same procedure as with an earthen floor. If the litter is to be completely removed and replaced with new litter, apply the Litter Magic at the rate of two [2] pounds per 1,000 square feet to the exposed floor BEFORE application of the new litter.

Spray application:

The applicator is advised to test spray prior to actual application. Nozzle opening may be affected by the minute granule consistency of the Litter Magic formulation. Apply Litter Magic to the barn floor surface at the same pounds per square foot as in the application of dry product, however a mix of two [2] pounds per twelve [12] to fifteen [15] gallon is recommended.

Please contact your supplier for additional information.

NFPA RATINGS:

Health: 0; Flammability: 0; Reactivity: 0
Contains/CAS Number
Calcium Carbonate/471-34-1
Viable Bacteria Culture/None
Shall Not Be Fed to Animals
Keep out of Reach of Children
